AEGIS Wins CARTS ID/IQ Contract

Huntsville, Alabama (October 20, 2010) - AEGIS Technologies is on the winning team for a contract by the U.S. Army Program Executive Office for Simulation, Training and Instrumentation to provide technical solutions to support the modernization of Army training ranges worldwide. The multiple award, indefinite-delivery/indefinite-quantity contract has a one-year base period of performance, four one-year options and a total ceiling value of \$400 million for all awardees if all options are exercised.

The Common Army Ranges and Target Systems (CARTS) contract will support the modernization of existing training ranges by integrating new devices and target systems. These modernization efforts will be compliant with Future Army System of Integrated Targets (FASIT), the Army's program that establishes a common standard for performance, communication and protocol associated with targets and devices used at all Army training ranges.

AEGIS Technologies received an award under LOT II with Booz Allen Hamilton as the prime contractor. The CARTS ID/IQ contract provides a vehicle to support the fabrication, integration, deployment, and maintenance of components in support of training ranges, both as integral components of larger ranges, or integrated entireties of smaller ranges.

"AEGIS Technologies is excited to continue its relationship with BAH in supporting PEO STRI's ongoing efforts to improve Soldier training as part of the Army's readiness," said Lance Cooper, Chief Operating Officer.

Lot II consists of the Range System Engineering/Integration to include Minor Range Construction or modifications, Non-permanent training mock-ups, Live fire facilities, Integration and Installation, Communication network systems, Audio/video/digital data, Recording system, Editing system, After action review, Central control systems/software, Range Subject Matter Expertise, Visual Recognition skills, Experimentation support and Scenario Generation.

About AEGIS Technologies Group

AEGIS is a privately held small business corporation headquartered in Huntsville, Alabama, that provides advanced technology and expert consulting services to industries throughout the world. AEGIS capabilities include Modeling & Simulation software development, training, test support, engineering
